

Offer of Technical Advice + much more

In response to a continuous flow of informal requests from our industrial clients worldwide (in specific from power and petrochemical/ process/ refining industries) for technical advice and assistance, ETD have now launched a Membership Scheme to support our clients. The request for technical advice and assistance may be on matters related to issues such as plant operation, maintenance, inspection, monitoring, materials (the traditional materials and the new higher strength martensitic steels, super stainless steels and Ni-based alloys), welding, weld repairs, crack assessment, component integrity and life extension, reliable data sources, sensitivity analysis, probabilistic assessment and a host of other such issues. This is in addition to the formal small or large projects that we regularly undertake for our individual or group clients. The informal requests for technical advice and assistance may need an ETD effort ranging from a few hours to a day or more.

ETD's International Membership Scheme (IMS) is for clients from anywhere in the world. So if you have a particular problem and need a quick and reliable answer then who better to contact than a member of staff at ETD with a network of experts from plant operation, maintenance and inspection through materials, welding, component integrity assessment and life extension to probabilistic assessment and risk based management, etc. With access to experts from Europe, USA, Japan and elsewhere, that we have regularly used and depended on for many years, we could provide you the best and most reliable advice to solve your everyday plant problems and thus increase plant reliability and profitability.

And this is not all. Depending on the level of membership, in addition to the technical support and assistance, this could include free subscription to one of our new or existing Group Sponsored Projects (GSPs), staff training, independent review of technical reports written for your plant by your company or outside experts, etc, etc.

The three levels of membership available are:

- FOUNDATION LEVEL MEMBERSHIP
- INTERMEDIATE LEVEL MEMBERSHIP
- ADVANCED LEVEL MEMBERSHIP

For the details of what is on offer and the Membership fee involved, please write to:
